The Solar Impulse lands at Lunken Airport

First solar airplane flies across US

Cincinnati, 15.06.2013, 20:26 Time

USPA NEWS - On the evening of June 5th, flying day and night without fuel, the first ever solar-power airplane made an unscheduled stop in Cincinnati, Ohio Lunken Airport. Pilots, Bertrand Piccard and André Borschberg were greeted by a crowd of spectators and Mayor Mark Mallory.

The Solar Impulse left San Francisco on May 3 and landed in Phoenix the next day. It departed Phoenix on May 22 and landed in Dallas the following day. It had been in St. Louis since June 4. New York's JFK International Airport will be the final destination in early July.

Although not originally scheduled to land in Cincinnati, it was decided due to winds and weather. Pilot Bertrand Piccard, doctor, psychiatrist and aeronaut, who made the first non-stop round-the-world balloon flight, said they received permission almost "within 30 seconds of the request" from Lunken Airport manager Fred Anderton.

Mayor Mark Mallory welcomed the crew of Solar Impulse, stated that this added to the history of the airport along side such previous visitors as Charles Lindbergh and The Beatles. Mayor Mallory commented on Lunken's "cutting edge" technology and was honored to be part of the first ever solar-powered airplane landing in Cincinnati's history. The Mayor went on to say how proud Cincinnati was of the crew of Solar Impulse and not only were they a part of aviation history, but now a part of Cincinnati history as well.

The plane is scheduled to depart around 7am Saturday June 16th en route to Washington's Dulles International Airport. The plane is fueled by 11,628 silicon solar cells mounted across the wings and horizontal stabilizer that power four electric engines. The Solar Impulse's journey can be tracked live at www.solarimpulse.com
